DETAILED ACTION

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Applicant has claimed uniquely distinct features in the instant invention which are not found in the prior art, either singularly or in combination. According to the invention, encrypted video data is received by a decrypter through a PCMCIA compliant connector and decrypts the video data into a video data stream. The device also contains a memory, a processor and a filter which receives the video data stream, and sending a portion of the video data stream specified by the processor to the memory for storage.

In another embodiment, , encrypted video data is received by a first decrypter through a PCMCIA compliant connector and decrypts the video data into a video data stream. This device also includes a solid state non-volatile memory, a memory interface, a processor and a filter which receives the video data stream, and sending a portion of the video data stream associated with a packet identifier specified by the processor to the memory interface for storage in the memory. The device further contains a reference clock that sends timing information to the memory interface for storage with the video data stream; and a first encrypter that receives data stored in the memory according to a packet identifier associated with the stored data from the memory interface, encrypts the data and sends the data to the connector, under control of the processor.
